MODERN DAHLIAS

There is no secret about growing exhibition Dahlias. It does not require expert knowledge. Anyone can grow them. All that is necessary, is to select good varieties and order them from a reliable grower. Start now by discarding your inferior stock, and replace them with some of the newer and better varieties. By adding a few each season you will have in a short time a good collection which you will never regret. You may leave the selection to us if you wish. Tell us what varieties you have and the amount you wish to spend.

DAHLIAS FOR CUT FLOWERS

Dahlias when properly grown and handled will keep longer than most flowers. Cut Dahlias in the morning when the dew is still on them. The earlier the better. Never cut them during the heat of the day. Cut with a fairly long stem, remove the lower leaves and place them deeply in cool, clean water. Leave the flowers in a cool place for a few hours so they may draw water before using them.

ROOTS

The size of the roots varies according to the variety. A large root does not always result in a large plant or flower. The essential thing is a strong, healthy field-grown root, showing a growing eye or sprout. We send no roots with broken necks. Nothing but strong, healthy roots in growing condition are shipped.

GREEN PLANTS

We make a specialty of green plants. They are properly grown, packed well, and safe delivery is guaranteed within a radius of 1,000 miles. Plants are ready about May 1st. Although they require a little more care in planting than roots, and will not mature as quickly, yet they will give good satisfaction, and often produce larger flowers than roots. The price of plants being half the price of roots, affords many an opportunity to try out the newer introductions at a greatly reduced expenditure. We make no charge for packing and prepay transportation charges when remittance in full accompanies the order. Plant them as soon as they arrive, water thoroughly, and shade them during the hottest hours of the first few days.

CULTIVATION

Dahlias are easily grown. They require no special treatment or soil to bring them to perfection. An open sunny situation is the best, but they will succeed in partial shade. Dig holes about three feet apart and six inches deep. Drive a strong stake in each hole, then lay the root down flat with its crown toward the stake. Cover with two or three inches of soil until after the plant comes up, then fill in the balance. We will send full cultural directions with each order. With these you should have no trouble in growing exhibition blooms, as they give you information on every stage of growth.

ORDER EARLY

Then you will get the varieties you want. Stock of some of the latest varieties is limited, so to avoid disappointment, we urge that you order early. All orders are filled in rotation, and stock is subject to prior sale. We will ship at the proper planting time, or whenever you desire them, if you specify the date.

TIME OF SHIPPING

We ship roots in April and May. If this does not agree with your plans, tell us when you want your order shipped. Roots shipped before April 1st are not guaranteed against loss by freezing.

MANY VARIETIES NOT LISTED

If you do not find the varieties you want in this catalogue, write us. We have many of which stock is too limited this season to catalog. But we will be glad to quote you our lowest prices on them.

While we list plants of only certain varieties, we will grow plants of any variety we list, at one-half the price of tubers, unless the price shall amount to less than 50c., which is the minimum price per plant. Should you desire plants we do not list, we will grow them for you if your order reaches us not later than March 1st, but would request that you send it to us as early as possible.

IF YOU WANT A THRILL

Grow Dahlias from seed. This is the way all new Dahlias are originated. Dahlias grown from seed will flower the first season. It is the most fascinating phase of Dahlia culture. Every seedling will be different, each a new variety. If you get good seed it is just as easy as raising Dahlias from plants. The seed we offer is well ripened and hand picked from strong, healthy bushes of the newest and best exhibition varieties. It is grown in a locality that is free from singles, pompons, and other small types, and therefore should produce a good percentage of large double flowers. Don't waste your time with cheap seeds.

HYBRID DELPHINIUMS

Delphiniums are very hardy perennials, thriving in any climate. They need rich soil, plenty of water and sunshine. Given these, they will reward you by blooming two, and in some localities three times each season. There are few perennials that have the charm of Delphiniums. They vary in color from the palest sky blue to the deepest indigo, and in height from three to eight feet. They are indispensable in the herbaceous border or garden, gorgeous as a background, in groups, or as single specimens. They are easy to grow and a lasting delight in any garden. Our hybrids are the result of careful selection, and hybridizing has given us marvelous results. We offer them as follows:

FIELD GROWN PLANTS

To obtain immediate results use one-year-old field grown plants, as they possess all their initial vigor. They should be planted in the fall or early spring, as soon as the frost is out of the ground.
